Prevent Accidental Poisoning
Every 15 minutes, a child under age 4 in the U.S. will overdose on medications found at home. Pets are poisoned daily from human meds found in the trash.

Reduce Drug Abuse
About 12% of Washington teens abuse meds. Over half of them get those meds from a family member or friend, often without that person’s knowledge.

Protect Our Waterways
Flushed meds are not broken down in the wastewater treatment process. They end up in our waterways, where they can harm fish and other wildlife.

Don’t save it. Don’t toss it. Don’t flush it.
Return meds in original packaging. Cross out personal info, but not medication names.

**ACCEPTED at Pharmacies**
Prescription and over-the-counter meds, medicated ointments/lotions, vitamins, inhalers, unopened EpiPens, pet meds.
