Lake Whatcom Watershed

About the Watershed
Lake Whatcom is the drinking water supply for about 125,000 residents of Whatcom County, and the city of Bellingham. The lake has surface area 9,800 acres, is 15 miles long and wide enough to support many species of fish and other aquatic life. The lake is fed by the Padden Creek, which flows into the lake from the north, and the Whatcom River, which flows into the lake from the south. The lake is the largest lake in Whatcom County, and is one of the largest lakes in Washington State. The lake is also a popular recreational area, with many lakeside parks and trails.

About the Map
This map shows the geographic location of the Lake Whatcom Watershed and surrounding area. The map includes the following landmarks: Lake Whatcom, Lake Padden, Padden Creek, Whatcom River, and MT. Baker. The map is color-coded to show the depth of the lake, with a color gradient ranging from light blue to dark blue. The map also includes a legend that shows the key features of the map, such as transportation routes and watershed boundaries.
